EXAMINER'S AMENDMENT

1. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with Applicant's attorney Brian C. Ellsworth on May 03, 2007.

IN THE CLAIMS:

1. (Currently Amended) A bi-stable member for a mobile station, comprising:
a first part;
a second part; and
at least one foldable portion comprised of bi-stable materials configured to foldably couple said first part to said second part, said at least one foldable portion is further configured to bias a mobile station between a folded position and an open position, and said at least one foldable portion includes a substantially flattened transverse cross-section in said folded position and a substantially C-shaped transverse cross-section along a width of said foldable portion in said open position.

18. (Currently Amended) A foldable device comprising:
a first functional component;

a second functional component;

a communication member for electrically connecting said first functional component to said second functional component; and

a bi-stable member for biasing said first and second functional components into an open position and a folded position, said bi-stable member defining at least one foldable portion having a substantially flattened [transverse] cross-section in said folded position and a substantially curved transverse cross-section along a width of said foldable portion in said open position.

32. (Currently Amended) A method of manufacturing a mobile station comprising the steps of:

providing a bi-stable member for biasing said mobile station between an open position and a folded position, said bi-stable member defining at least one foldable portion having a substantially flattened transverse cross-section in said folded position and a substantially C-shaped transverse cross-section along a width of said foldable portion in said open position;

coupling a first functional component to said foldable portion of said bi-stable member; and

coupling a second functional component to said foldable portion of said bi-stable member.

Conclusion

2. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Rasha S AL-Aubaidi whose telephone number is (571) 272-7481. The examiner can normally be reached on Monday-Friday from 8:30 am to 5:30 pm.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Ahmad F. Matar, can be reached on (571) 272-7488.
